All liability for loss or damage whether consequential or otherwise arising from negligence or from any cause whatsoever is excluded.

(The owner is required to retain and present the original tax invoice to support any claim)

Important

Do not wind down windows for 48 hours, (and in the event of damp weather for at least 72 hours.)
Do not wash windows for 10 days after installation, giving the film time to adhere to the glass properly.

Small spots which may appear are minute particles which will not affect the film in any way. Every precaution is taken to minimise these spots but they are inherent with a solvent based adhesive system.

While the film is drying it may have a hazy or cloudy appearance and some films may have pooling of water requiring a longer drying period in cooler weather. When dry, the film will appear optically clear.

Care & Protection

Automotive film, although extremely durable, is not hardened as is glass, therefore care should be exercised in the materials used for cleaning.

Please ensure you wash the inside of the glass with clean fresh water.
Dirty water used to clean the outside of the car and glass will generally carry dirt and grit, which will scratch and deteriorate the film if used on the internal side of the glass.

Do not use hard brushes, scrapers, abrasive cleaners, ammonia based cleaners, gummed stickers, decals etc. Such use of these products will damage the film and will render your warranty void.

Remember Llumar Eminm tint is the same material used in plastic sunglass lenses.
With a little extra care to protect your tinting, you can expect many years of satisfactory performance.

Cleaning Instructions

Use a non-ammonia based cleaner (PH Neutral), or just warm water,
and a microfibre polish cloth to help keep your tinted windows in good order.

Do not rub or scour the film. Use soft, even strokes, in a downward motion on the side windows and across the glass on the rear screen. Keep grit and sand from channels and rubbers.
